User-generated Content

- Conversation and Stories**
Information gathered through conversation and shared stories is fed back to the AI Insights for continuous learning from conversations.
- Tracking nature change data - Crowd-sourced**
Data collected through the system by volunteers about the state and condition of a green space, regarding its health, plant biodiversity, and wildlife.
- Tracking behaviour Change data**
The data about users' change in behaviour is collected and used to future AI insights to identify what activities promote nature coexisting and what activities are not effective.
