the low part of the building, the beauty of which is greatly enhanced in one's estimation by the knowledge of its being founded on principles of utility. One can see at a glance that it is the na-

LOG HUT.

tural shell of a certain definite amount of accommodation, to which a more advanced stage of development might probably add some degree of architectural embellishment. The projecting ends of the logs, at the angles of the structure, present legitimate objects for carving and other decorations, and the ends of the rafters, if made to shew boldly out at the eaves, would enhance the effect.
